Abstract:

JP 1096106 A

A new external skin agent contains one or more flavone glycosides of formula (I) and/or isoflavone glycosides of formula (II); where e.g. R1 = H, OH, or OCH3; R2 = H, OH, or OCH3, R3 = H, OH, or OCH3, R4 = Glucose; R5 = OH, or OCH3; R6 = OH or OCH3) R7 = R8 OCH2O; R9 = H or OH; R10 = H or OH;; R11 = O-Glucose or O-Glucose-Glucose; and R12 = H.

The glycosides may be natural or synthetic. The natural glycosides are extracted, e.g., from Iridaceae plants, such as Iris florentinal L., with one solvent of ethyl acetate, butyl acetate, amyl acetate, acetone, methyl ethyl ketone, acetyl acetone, methanol, ethanol, butanol, water, and their mixts. To remove hydrophobic ingredients, the extract may be subjected in advance to extrn. with a nonpolar solvent e.g. hexane. Further purificn. is done, e.g., by silica-gel column chromatography with a mixed solvent of chloroform, methanol, and water, followed by reversed phase chromatography with C18. The blend ratio of the glycoside(s) based on the dry form is 0.000001-5 wt.%, pref. 0.00005-1 wt.%.

USE/ADVANTAGE - The agent is effective for curing wounds, preventing and curing rough skin, and preventing ageing e.g. wrinkles and loss of glossiness.
